this is a small book on algebra where the stress is laid on the structure of elds hence its title youwillhearaboutequations bothpolynomialanddi erential andabout the algebraic structure of their solutions for example it has been known for centuries how to explicitly solve polynomial equations of degree 2 baby nians many centuries ago 3 scipione del ferro tartaglia cardan around th 1500a d and even 4 cardan ferrari xvi century using only algebraic operations and radicals nth roots however the case of degree 5 remained unsolved until abel showed in 1826 that a general equation of degree 5 cannot be solved that way soon after that galois de ned the group of a polynomial equation as the group of permutations of its roots say complex roots that preserve all algebraicidentitieswithrationalcoe cientssatis edbytheseroots examples of such identities are given by the elementary symmetric polynomials for it is well known that the coe cients of a polynomial are up to sign elementary

symmetric polynomials in the roots in general all relations are obtained by combining these but sometimes there are new ones and the group of the equation is smaller than the whole permutation group galois understood how this symmetry group can be used to characterize the solvability of the equation he de ned the notion of solvable group and showed that if the group of the equation is solvable then one can express its roots with radicals and conversely

this book enriches our views on representation and deepens our understanding of its different aspects it arises out of several years of dialog between the editors and the authors an interdisciplinary team of highly experienced researchers and it reflects the best contemporary view of representation and reality in humans other living beings and intelligent machines structured into parts on the cognitive computational natural sciences philosophical logical and machine perspectives a theme of the field and the book is building and presenting networks and the editors hope that the contributed chapters will spur understanding and collaboration between researchers in domains such as computer science philosophy logic systems theory engineering psychology sociology anthropology neuroscience linguistics and synthetic biology
