This textbook provides a simple approach to understand the various complex aspects of stereochemistry. It deals with basic static stereochemistry and gives an overview of the different isomeric forms and nomenclatures with simple writing style and many examples. This book covers the topics such as stereochemistry of hydrocarbons, alkenes, cycloalkenes, optically active compounds, trivalent carbon, fused, bridged, and caged rings, and related compounds. This textbook also covers the additional topics such as optical rotatory dispersion and circular dichroism, stereochemistry of elimination reactions, substitution reactions, rearrangement reactions, and pericyclic reactions. The book includes pedagogical features like end of chapter problems and key concepts to help students in self-learning. The textbook is extremely useful for the senior undergraduate and postgraduate students pursuing course in chemistry, especially organic chemistry. Besides this, the book will also be a useful reference book for professionals working in various chemical industries, biotechnology, bioscience, and pharmacy.
