27 okt 2009   when is a space in a url encoded to and when is it encoded to 20

18 apr 2013   311 a bit of explaining as to what that 2520 is the common space character is encoded as 20 as you noted yourself the character is encoded as 25 the way you get

metabyter i think it is more technically correct to phrase the question as in a url should i encode the spaces using 20 or in the query part of a url because while the example you show

sometimes the spaces get url encoded to the sign and some other times to 20 what is the difference and why should this happen

since it s not mentioned anywhere in the grammar the only way to encode a space is with percent encoding 20 in fact the rfc even states that spaces are delimiters and should be ignored in

16 dez 2012   i am interested in knowing why 20 is used as a space in urls particularly why 20 was used and why we even need it in the first place
