software product lines are emerging as an important new paradigm for software development product lines are enabling organizations to achieve impressive time to market gains and cost reductions in 1997 we at the software engineering institute sei

launched a product line practice initiative our vision was that product line development would be a low risk high return proposition for the entire software engineering community it was our hope from the beginning that there would eventually be sufficient interest to hold a conference the first software product line conference splc1 was the realization of that hope since splc1 we have seen a growing interest in software product lines companies are launching their own software product line initiatives product line technical and business practices are maturing product line tool vendors are emerging and books on product lines are being published motivated by the enthusiastic response to splc1 and the increasing number of software product lines and product line researchers and practitioners the sei is proud to sponsor this second conference dedicated to software product lines we were gratified by the submissions to splc2 from all parts of the globe from government and commercial organizations from these submissions we were able to assemble a rich and varied conference program with unique opportunities for software product line novices experts and those in between this collection represents the papers selected from that response and includes research and experience reports

while standardization has empowered the software industry to substantially scale software development and to provide affordable software to a broad market it often does not address smaller market segments nor the needs and wishes of individual customers software product lines reconcile mass production and standardization with mass customization in software engineering ideally based on a set of reusable parts a software manufacturer can generate a software product based on the requirements of its customer the concept of features is central to achieving this level of automation because features bridge the gap between the requirements the customer has and the functionality a product provides thus features are a central concept in all phases of product line development the authors take a developer's viewpoint focus on the development maintenance and implementation of product line variability and especially concentrate on automated product derivation based on a user's feature selection the book consists of three parts part i provides a general introduction to feature oriented software product

lines describing the product line approach and introducing the product line development process with its two elements of domain and application engineering the pivotal part ii covers a wide variety of implementation techniques including design patterns frameworks components feature oriented programming and aspect oriented programming as well as tool based approaches including preprocessors build systems version control systems and virtual separation of concerns finally part iii is devoted to advanced topics related to feature oriented product lines like refactoring feature interaction and analysis tools specific to product lines in addition an appendix lists various helpful tools for software product line development along with a description of how they relate to the topics covered in this book to tie the book together the authors use two running examples that are well documented in the product line literature data management for embedded systems and variations of graph data structures they start every chapter by explicitly stating the respective learning goals and finish it with a set of exercises additional teaching material is also available online all these features make the book ideally suited for teaching both for academic classes and for professionals interested in self study
